

Shared Rostering Overview

What is Shared Rostering?

Shared Rostering enables teachers, under the same license coordinator, to share students from their classroom roster with other teachers in their school or district. This includes sub-coordinated accounts. The essential element that enables teachers to share students is that the teachers must be rostered under the same license coordinator, and the two teachers have at least one product license in common.

One example of why teachers may want to share students is if a student works with a specialist outside of their homeroom classroom. The specialist can then give assignments and monitor progress. The reading specialist can pull in students that they work with to provide differentiated instruction. One convenient feature of our shared rostering process is that the homeroom teacher does not have to do anything to allow sharing, such as give the specialist permission to share in the student.

Shared Rostering is an optional feature and must be requested to be turned on by either your Learning A-Z implementation coordinator or through customer service. Once the feature is enabled, it is on for all of the license holders under the license coordinator; we are unable to turn the feature on for individual teachers.

Sharing Students

Shared Rostering is a “pull-in” process. Teachers can pull in students from the homeroom teacher when they have at least one product in common. For example, teachers who have Raz-Plus and Science A-Z licenses can share students into their class if the homeroom teacher has either Raz-Plus, Raz-Kids, or Science A-Z.

The process for sharing students is simple. The Learning A-Z system will identify which students the sharing teacher is eligible to share, and they will be listed for the teacher to select. Students who are not eligible to be shared will not appear on the teacher list for sharing. To make classroom management easier, Learning A-Z recommends that teachers group students using the Group Students feature.

The [Blasting Off With Shared Rostering](#) recorded webinar will demonstrate the sharing process for the classroom teachers.

Creating Assignments and Student Management

Students have access to the products that their homeroom teacher is licensed to utilize, even when shared with a teacher that has additional product access. For example, a student on the classroom roster of a homeroom teacher licensed to Raz-Plus is able to receive Raz-Plus assignments, but not assignments to Science A-Z or other unlicensed products.

Teachers that share students into their classroom can make assignments based on the common product licensed to the homeroom teacher of that shared student. This is an important distinction because the sharing teacher can only create assignments for students based on the products that the sharing teacher has in common with the homeroom teacher.

For example, if the homeroom teacher has Raz-Plus and Science A-Z licenses, and the sharing teacher only has a Science A-Z license, the sharing teacher can share students and make assignments only for Science A-Z. They will not be able to create any Raz-Plus assignments.

Example 1: Homeroom Teacher Has Access to More Products Than Shared Teacher

Licensed Products	Homeroom Teacher Science A-Z and Raz-Plus	Shared Teacher Science A-Z
Share Students	✓	✓
Change Raz-Plus Reading Level	✓	×
Change Science A-Z Reading Level	✓	✓
Assign Raz-Plus Assignments	✓	×
Assign Science A-Z Assignments	✓	✓
Edit Student Profile	✓	×
View Student Usage Reports	✓	✓
Create Student Groups	✓	✓

If the product access is reversed, and the homeroom teacher only has Science A-Z access, while the Share In teacher has Science A-Z and Raz-Plus, then the student will only have access to Science A-Z. The Share In teacher can assign Science A-Z assignments to this student, but not Raz-Plus assignments.

Example 2: Homeroom Teacher Has Access to Fewer Products Than Shared Teacher

Licensed Products	Homeroom Teacher	Shared Teacher
	Science A-Z	Science A-Z and Raz-Plus
Share Students	✓	✓
Change Raz-Plus Reading Level	×	✓
Change Science A-Z Reading Level	✓	×
Assign Raz-Plus Assignments	×	✓
Assign Science A-Z Assignments	✓	✓
Edit Student Profile for Science A-Z	✓	×
View Student Usage Reports	✓	✓
Create Student Groups	✓	✓

Note that when teachers are setting up their rosters in the system a pop-up notification will identify which students are eligible to be rostered into their class.

Shared Rostering Logistics

- Teachers can pull in an additional 100 students to their rosters, in addition to their 36 homeroom students.
- Only the homeroom teacher can edit student usernames, passwords, and Parent Access.
- Sharing teachers can create assignments for students, view reports, manage students in their roster, adjust the students' assignment settings, and group students.
- Our [How to Use Shared Rostering](#) guide is available to walk teachers through the process of setting up their shared rosters and viewing reports.
